

AI Engineer Assessment

Applicant brief | Kathmandu | 1-2 years of experience

Time allowed	2 calendar days to complete your chosen task.
Questions	One clarifying email is allowed.
Contact	info@cantor-dust.com
Core instruction	Choose exactly one task. Do not submit both.

Assessment overview

Both tasks involve SunBridge Trading, a fictional entity that is trying to import goods from the same manufacturing country: **China**, where the manufacturers are based. Each task ships to a different import country and must be framed around that destination country's import-side expectations.

Choose Task 1 or Task 2

	Task 1	Task 2
Export country	China	China
Import country	Nepal	Bangladesh
Client situation	Manufacturer paperwork has already arrived (two PDFs).	Only a datasheet, short form, and call notes are available.
What to watch for	The same facts appear in different places, and formats may not match.	Some details are missing or do not quite line up.
Import-side guideline	NEPOA 2025 (Nepal)	Renewable Energy Policy 2025 (Bangladesh) + SREDA grid-tied inverter standards

Why pick Task 1 Choose this if you prefer to start with documents already in hand, read through them, reconcile inconsistencies, and decide what SunBridge needs for a Nepal import review.	Why pick Task 2 Choose this if you prefer very little to start with, mark gaps clearly, and put together something useful for a Bangladesh import review before full factory paperwork arrives.
---	---

What to submit

- **GitHub repository** with your work.
- **Video demo** - a short screen recording (roughly 3-8 minutes) walking through what you built and how you approached the problem. Upload it to Drive, Loom, YouTube (unlisted), or a similar platform, and submit the link with your repository.
- **Task scope** - complete one task only. You may use a workflow library such as LangGraph or an autonomous agent such as Hermes, Claude Code, or Cursor Agent. You may also choose to combine both when relevant.

Repo visibility	Instruction
Public	Submit the repository URL in the form.
Private	Submit the URL and invite diwaskunwar on GitHub.

Use the destination-side guidelines correctly

Each import guideline shows what that destination country tends to ask for: required documents, technical checks, labeling, and importer paperwork.

Use the guideline as a reference for the import side only - not as source data and not as a blank form to copy section-by-section.

Task 1 - China to Nepal

Export: China | Import: Nepal

Goal

Prepare a clear, honest draft that SunBridge Trading can share with its Nepal import agent for review. Focus on product details, manufacturer information, test information, labeling, and any mismatches across the two manufacturer PDFs.

Candidate guidance

- Use **NEPQA 2025 guideline** as a rough picture of what Nepal import reviews for solar inverters usually ask for.
- You do not need to understand every technical term in the manufacturer PDFs. Focus on what seems important for a Nepal import review.
- The two PDFs may not describe the exact same product. Work with what is available and note anything unclear.
- A work-in-progress is fine. We want to see your thinking, not a perfect final filing.

Resources

- [NEPQA 2025 \(Nepal\)](#) - Use as the import-side reference.
- [Manufacturer PDF 1 - DSS_GZES230100125901_combined-1.pdf](#) - China export file.
- [Manufacturer PDF 2 - 188_1115.pdf](#) - China export file; may describe a slightly different variant.

Client brief

From: Ramesh | SunBridge Trading | Kathmandu

Subject: Nepal shipment paperwork - need help

Hi,

We are importing grid-tied inverters from China into Nepal. Our local agent keeps asking for the Nepal compliance file. I am not sure what the official name is, and it is not the same paperwork the factory uses for its home market.

The manufacturer sent two PDFs. They may be for slightly different variants - we are not 100% sure. Some numbers appear in both, sometimes worded differently.

We need something we can share with the agent for review. It should cover the product, manufacturer, test information, and labeling. Nepal uses different names and layouts than the export documents. Our agent pointed us to the NEPQA 2025 guideline as an example of what Nepal import reviews usually want - helpful as a reference, not something to copy word-for-word.

If two sources do not match, show that honestly. A rough draft is fine.

Please send back whatever you think SunBridge should receive for the Nepal import, with a short note on how you approached it.

Thanks,
Ramesh

What your Task 1 submission should make easy to review

What product and variant the paperwork appears to describe.

What information is consistent across sources and what does not match.

Which items appear relevant to Nepal import review, and what is still unclear.

Task 2 - China to Bangladesh

Export: China | Import: Bangladesh

Goal

Prepare an early, presentable compliance bundle that helps SunBridge Trading review a Bangladesh import internally before the factory sends the full document set. Be explicit about missing information and uncertainty.

Candidate guidance

- You are not expected to have test certificates or lab reports. The factory has not sent them yet, and that is intentional.
- Where information is missing, say so plainly (for example, "pending from manufacturer"). That counts as a valid answer.
- The form and call notes may not agree on small details, such as power wording or weight. You do not need to pick a winner; show what you know and what is uncertain.
- Use the Bangladesh Renewable Energy Policy 2025 and SREDA grid-tied inverter standards only as a rough picture of what Bangladesh import reviews tend to ask for.
- Sections can be thin for testing and labeling if you have almost nothing to go on, as long as that is obvious in the submission.

Resources

- [Deye datasheet - SUN-3-15K-G06P3-EU-AM2-P1](#) - Use as source data.
- [Bangladesh Renewable Energy Policy 2025](#) - Use as an import-side reference.
- [SREDA grid-tied inverter standards](#) - Use as an import-side reference.

Buyer form

Ref: INT-2024-8841
Buyer: SunBridge Trading Pvt. Ltd.
Destination: Bangladesh
Item: SUN-5K-G06P3-EU-AM2-P1 (buyer wrote "5000 W", rooftop)
Maker: Ningbo Deye Inverter Technology Co., Ltd., China
Attached docs: none
Need by: 2024-11-30

Call notes from Ramesh (2024-10-03)

Notes

Model SUN-5K-G06P3, 5 kW, Deye (China). Said IP65. Weight maybe 18 kg? Installer guessed. Mentioned SGS and "high 90s efficiency" on the phone - nothing in writing. No label photo yet. They want something to circulate internally before the real certificates arrive. It is OK to mark parts as "pending from factory" where you are unsure.

Client brief

From: Ramesh | SunBridge Trading | Kathmandu

Subject: Bangladesh order - early draft before factory sends the rest

Hi,

We are importing grid-tied inverters from China into Bangladesh. The agent wants a compliance bundle, but the factory has not sent the full set yet.

For now, we only have the datasheet, buyer form, and call notes above.

They want something presentable for a Bangladesh import review - product details, testing, manufacturer, and labeling. Our agent shared the Renewable Energy Policy 2025 and SREDA inverter standards page as examples of what Bangladesh expects. Use them as a hint, not a blank form to fill.

Use only the link, form, and call notes above as source data.

Please send back what you would give SunBridge for the Bangladesh import, and mention anything we still need to ask the factory for.

Thanks,
Ramesh

What your Task 2 submission should make easy to review

What is known from the datasheet, buyer form, and call notes.

What is uncertain or only stated verbally.

What is pending from the factory, especially testing evidence, certificates, and label photos.
